.

# *Extremely superb gemstone*

**Loose gemstone, blue-green in color. Natural grandidierite with refractive index of 1.58-1.63. Oval faceted cut.**

**This natural grandidierite originated from Madagascar. This rare mineral is mainly composed of magnesium, aluminum, and boron with traces of Iron**

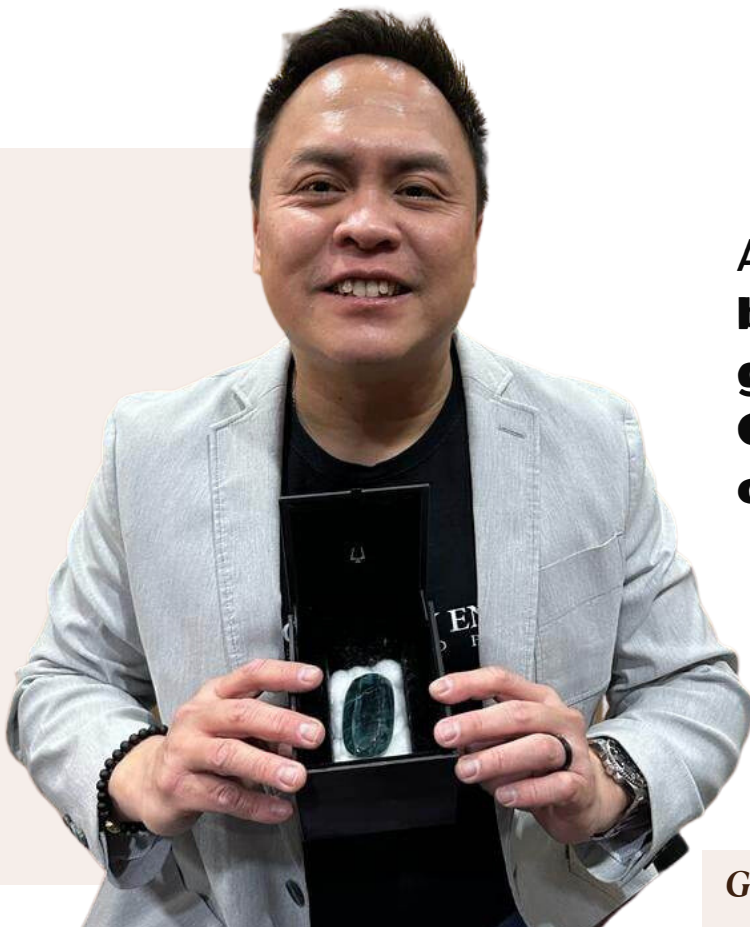

*The most  
desired  
gemstone  
because of its  
value,  
distinctiveness,  
and extreme  
rarity.*

## *Precious Gemstone*

**Granddierites display strong trichroic pleochroism. That means that it can show three different colors depending on the viewing angle: dark blue-green, colorless or dark green.**

**Appraised and certified by a prominent gemologist from the Gemological Institute of America.**
