YELLOW STONE *Catalog*

YELLOW STONE

The yellow stone is a stunning gemstone that is known for its warm and inviting color.

This gemstone is a type of chrysoberyl and can range in color from pale yellow to a deep golden hue. Its unique color is due to the presence of iron in its chemical composition.

Discover the natural warmth and luminosity of the yellow stone

The yellow stone has a hardness of 8.5 on the Mohs scale, making it a durable gemstone that is suitable for use in jewelry.

It is often used in engagement rings, necklaces, and earrings, and its warm and inviting color makes it a popular choice for those who want to add a touch of luxury to their jewelry collection.
